

EMC Networker Implementation Services

Performance Technologies SA is a Tier 1 EMC Velocity Signature Solution Center partner (the highest possible level partnership of EMC), specialized in Backup Restore Systems; has designed and implemented an advanced Performance | EMC Signature Solution Center facility where state-of-the-art EMC technologies are being demonstrated in physical and virtual environments.

Performance Technologies leverages a team of highly trained and experienced engineers, engaging with customers in order to:

- Design a comprehensive backup solution to meet the specific IT needs and business objectives of your organization.

PERFORMANCE Technologies meets with your team to ensure the environment is ready for EMC Networker. The current environment is reviewed and analyzed to be sure the target configuration is possible and optimized to meet your requirements. The developed plan is created, ensuring there is consensus of project scope, objectives, and timeframe.

- Implement and test the solution in your IT environment.

PERFORMANCE Technologies executes against the approved plan. Engineering Team installs the Networker server, the necessary (predefined) number of clients and the designated backup devices. A test backup job is scheduled and executed, demonstrating the backup capabilities. Data is restored from this job ensuring EMC Networker is fully operational.

- Train your IT personnel responsible to operate the Networker backup processes.

Once the implementation is complete, a knowledge transfer session is conducted allowing your team to increase their familiarity with EMC Networker.
